

L-450 Polyethylene Pulpit.

The ANS L-450 round pulpit is made from a high strength polyethylene compound to provide a rigid, non-brittle pulpit suitable for cable splicing and isolating transformer housings. The round tapered design is compliant with Transport Canada specification K303 and is H20 load rated, when used with the steel cover.

The ANS L-450 comes with a galvanized steel locking cover using tabs and a single locking bolt to secure the cover and to also prevent inadvertent cover rotation.

It is offered in one size of pulpit but with options that include a cover with a 2" hub for mounting fixtures, risers and transformer hangars.

Ordering Code

L-450-□□□

1 = Cover No Hub
2 = Cover with 2" Hub

R = Riser

TH = Transformer hangar
